Players can fight in the first person, or up to three at a time in the fourth person. Players select weapons, match-ups, and other aspects of their cybernetic alter-ego that can be triggered by winning certain battles. Players are initially given a "Hasegawa" form; the game's protagonist, a.k.a. "The Demon King" in the original plan for the game, and his recommended fighting style. The default cybernetic abilities that are unlocked for him are the ability to breath and a breath fire attack. Once all five of the default cybernetic abilities have been unlocked, a sixth, after-battle ability can be unlocked through leveling up the character. However, players do not have to wait to unlock a new cybernetic ability until the battles have been beaten and rewarded. Players can, however, unlock new "abilities" for their characters by spending in-game currency. Players are given an assortment of weapons. A short description of each weapon is displayed at the top of the screen, which can be modified in four ways: weight, attack, effect, and angle. Players can upgrade their weapons by equipping "power-up" items that are randomly produced from defeated enemies. These power-up items can be equipped to any one of the four weapons. A weapon attack is a set of three attacks that players can initiate. The attacks range from melee to ranged, with a fourth type of attack only accessible during certain battles. The attacks can be modified in 3da54e8ca3
