Editing images in Photoshop can be a somewhat complex process, so there's no reason to worry if you don't feel comfortable working in it. Although the techniques in this book were designed to be used with Photoshop, you can do all the techniques without it. Just remember: When you use a layer, you need to save as a Photoshop file, and you can't use the layer in a non-Photoshop program. Use the image in this book for images that you see to inspire you and help you understand and

create the techniques presented here. You can easily modify the file to your taste and create your own. Just be sure to save the image with a different file format such as .jpg because it's easier to manipulate those files in other programs. It can be a daunting task to prepare an image for online publication, and perhaps it's just me, but when I compare the time spent doing this to the time I spend teaching people how to use Photoshop, I feel like I'm making a difference in lives. The reason that I've created this book is to help you understand how to use Photoshop and achieve the best results for the least amount of time. That said, I assume that I'm not going to save you from getting started with Photoshop, so here's a quick course in what you'll need before you begin. At the beginning of this

book, I introduce you to the basics of how to work with layers. In Chapter 4, you see how to create and work with layers, how to organize them, and how to use masks and opacity to manipulate images. In Chapter 5, I show you how to create and apply content-specific overlay effects. This chapter helps you understand what layers are and how to use them. Layers are one of the features of

Photoshop that make the software very powerful. Although the following simple overview of layers might be helpful, it isn't sufficient for understanding the concepts behind using layers. Don't worry if you skip this chapter, as I walk you through several fundamental tasks with layers in Chapter 4.

When you're comfortable working with layers, you can return to this chapter and review the basics. Photoshop allows you to

work with any kind of object inside any kind of layer. The following list describes the different layers available to you in Photoshop: Layers: The basic type of layer in Photoshop. The Layers panel lists all the layers you have on your image. You can add and delete layers to or from your

Q: Meteor: MongoDB - Found at least one document which does not have a `_id` field. I'm using meteor-collection2 for a very simple application. When I start the server and do `db.find()` I get the following error: Exception while invoking method 'find' Error: Found at least one document which does not have a `_id` field. Any ideas on how to fix this? A: For your meteor-collection2 define this new collection in your root level application startup:

```
CustomCollections.myCollectionDefinition = { hasNoAutoId: true, autoId: null };
```

A: I had this problem, where `find()` did not work but `findOne()` did. Setting the collection's `hasNoAutoId` to true fixed it. Change your

collection definition to look something like this: `CustomCollections.definition = { hasNoAutoId: true, autoId: null }`; I think there is a bug somewhere in the collection definitions since they are very counter-intuitive to me. I might be wrong but I had this problem with Meteor 0.5.2.1 and Meteor 1.0.1.0. I found this answer here: Q: How to detect if a specific app is executing in Windows from another process? I am writing an application that needs to determine if a specific app is currently running from a desktop shortcut (via `ShellExecute`). Is this possible? A: As you have mentioned in the comments, you need to look at the process id. As for actually finding the process ID, there are a few ways to do this. I would suggest using either WMI or `EnumProcesses`. The following is an

```
example using WMI. public static bool
IsAppRunning( string friendlyName ) {
ManagementObjectCollection
objectCollection; objectCollection = new
ManagementObjectSearcher( "SELECT *
FROM Win32_Process WHERE Name = '"
+ friendlyName + "'" ).Get(); bool
isProcessRunning = false; foreach
(ManagementObject object in
objectCollection) { isProcessRunning
```

Napkin Bandit The Napkin Bandit, also known as the Montgomery County Jumper, was a bank robbery suspect whose crimes were described by the Montgomery County Police Department as being "unusual" due to his carrying out the heists while in the

process of being jettisoned from a moving automobile. In each case, the suspect entered a bank accompanied by a decoy or patsy who was later shot or otherwise apprehended, and then performed a holdup while seated at a table. All four robberies occurred in the early morning hours of May 4, 1978. After his arrest in connection with the Marion/Harrisonburg bank robbery in Harrisonburg, Virginia, the suspect was linked to a string of robberies occurring in Montgomery County, Maryland. The robbery of a bank in Gaithersburg matched the same modus operandi as the other three robberies, and two of the victims identified the Napkin Bandit. Conviction On May 7, 1978, Napkin Bandit was convicted of bank robbery in all four cases, and sentenced to life in prison. The following day, the

bandit's eighth robbery of a bank or restaurant was committed in Columbia, Maryland. The same modus operandi was used, and the robber, riding in a stolen 1977 Plymouth Sundance hatchback, was later arrested when a \$1,000 reward was announced for his capture, though initially none was posted.
